02 / EVENTS STAFFING

AV & Live Events Staffing Platform

Event companies staff certified freelance crew — matched, scheduled, paid — across web, iOS and Android from one codebase.

02 — OVERVIEW

AV & Live Events Staffing Platform

Event companies need to staff certified freelance crew for live events — with conflict-free scheduling, compliant pay and automated payouts — on web and mobile alike.

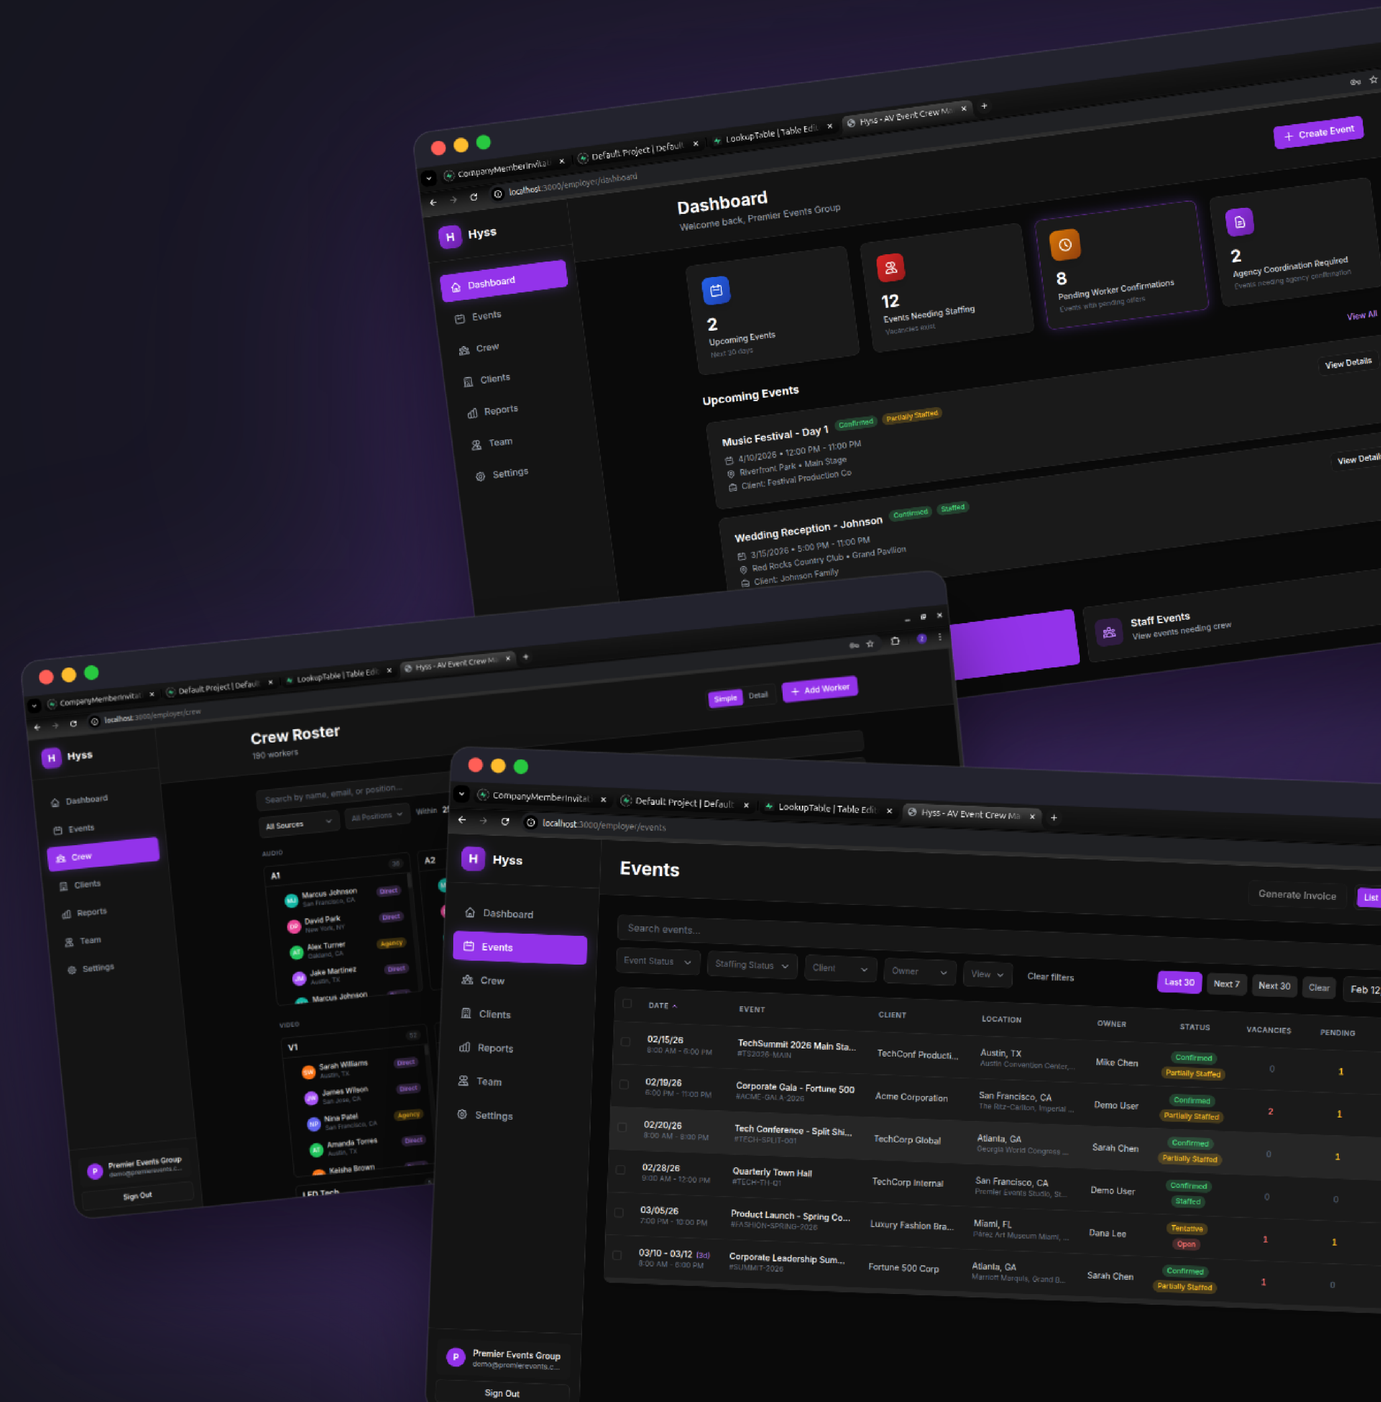

ROLE **Lead full-stack engineer**

93
DATA MODELS

~340
TRPC PROCEDURES

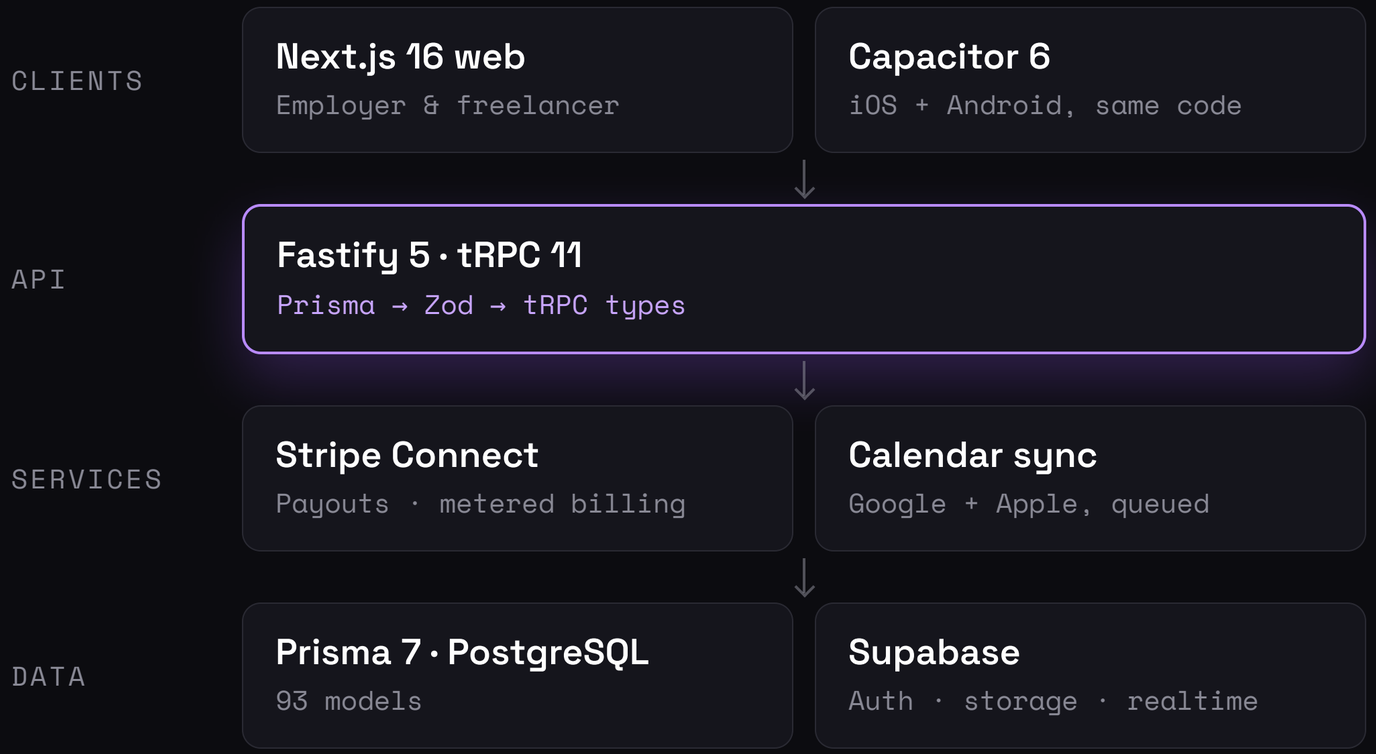

3
PLATFORMS · ONE CODEBASE

- Wizard-driven event creation & recurring shifts
- Competency-based matching with conflict detection
- Freelancer calendars, time-off requests & ICS sync

02 — ARCHITECTURE & STACK

One codebase, three platforms, end-to-end types

KEY DECISIONS

01 One Next.js codebase ships web, iOS and Android through Capacitor, plus a custom native Android plugin

02 End-to-end types: Prisma → Zod → tRPC → React Query, so an API break fails the build

03 Authorization lives in tRPC middleware, so RBAC is part of each procedure's type

04 Bidirectional Google + Apple calendar sync on a retryable, row-locked job queue

STACK

FRONTEND: Next.js · React · TypeScript · Tailwind · Capacitor

BACKEND: Node.js · Fastify · tRPC · Prisma · Zod

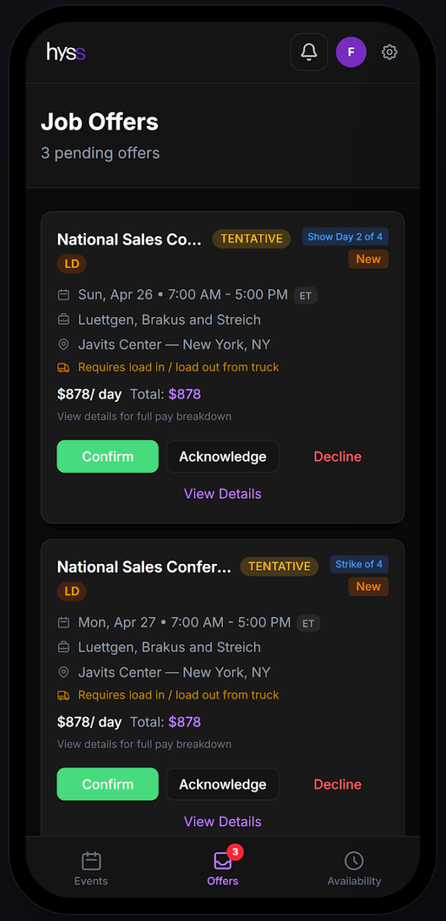

PLATFORM: Supabase · Stripe Connect · Turborepo

02 — WALKTHROUGH

TRPC PROCEDURES

3
PLATFORMS · ONE CODEBASE

Hardened for production with TOTP multi-factor auth, idempotent Stripe webhook reconciliation and a full-stack Playwright suite on every pull request.

WHAT SHIPPED

- Web, iOS and Android shipped from one Next.js codebase
- Stripe Connect payouts with hybrid seat + usage billing
- Bidirectional Google + Apple calendar sync
- Sentry-monitored on Vercel and Railway
